Revised by

Stephen Gildea

X Consortium (1994)

Thomas Dickey

XFree86 Project (1996-2005)

Definitions

- c The literal character c.
- C A single (required) character.
- P_s A single (usually optional) numeric parameter, composed of one of more digits.
- P_m A multiple numeric parameter composed of any number of single numeric parameters, separated by ; character(s). Individual values for the parameters are listed with P_s .
- P_t A text parameter composed of printable characters.

C1 (8-Bit) Control Characters

The *xterm* program recognizes both 8-bit and 7-bit control characters. It generates 7-bit controls (by default) or 8-bit if S8C1T is enabled. The following pairs of 7-bit and 8-bit control characters are equivalent:

```
Index (IND is 0x84)

ESC E

Next Line (NEL is 0x85)

ESC H

Tab Set (HTS is 0x88)

ESC M

Reverse Index (RI is 0x8d)

ESC N

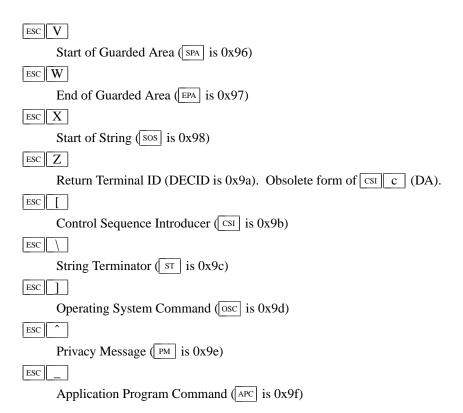

Single Shift Select of G2 Character Set (SS2 is 0x8e): affects next character only

ESC O

Single Shift Select of G3 Character Set (SS3 is 0x8f): affects next character only

ESC P

Device Control String (DCS is 0x90)
```

These control characters are used in the vtXXX emulation.

VT100 Mode

Most of these control sequences are standard VT102 control sequences, but there is support for later DEC VT terminals (i.e., VT220, VT320, VT420), as well as ISO 6429 and *aixterm* color controls. The only VT102 features not supported is auto-repeat, since the only way X provides for this will affect all windows. There are additional control sequences to provide *xterm*-dependent functions, such as the scrollbar or window size. Where the function is specified by DEC or ISO 6429, the code assigned to it is given in parentheses. The escape codes to designate and invoke character sets are specified by ISO 2022; see that document for a discussion of character sets.

Single-character functions

BEL	Bell (Ctrl-G)
BS	Backspace (Ctrl-H)
CR	Carriage Return (Ctrl-M)
ENQ	Return Terminal Status (Ctrl-E). Default response is an empty string, but may be overrid-
	den by a resource answerbackString.
FF	Form Feed or New Page (NP) (Ctrl-L) same as LF
LF	Line Feed or New Line (NL) (Ctrl-J)
SO	Shift Out (Ctrl-N) \rightarrow Switch to Alternate Character Set: invokes the G1 character set.
SP	Space.
TAB	Horizontal Tab (HT) (Ctrl-I)
VT	Vertical Tab (Ctrl-K) same as LF
SI	Shift In (Ctrl-O) \rightarrow Switch to Standard Character Set: invokes the G0 character set (the
	default).

Controls beginning with ESC (other than those where ESC is part of a 7-bit equivalent to 8-bit C1 controls), ordered by the final character(s).

ordered by the final character(s).			
ESC SP F	7-bit controls (S7C1T).		
ESC SP G	8-bit controls (S8C1T).		
ESC SP L	Set ANSI conformance level 1 (dpANS X3.134.1).		
ESC SP M	Set ANSI conformance level 2 (dpANS X3.134.1).		
ESC SP N	Set ANSI conformance level 3 (dpANS X3.134.1).		
ESC # 3	DEC double-height line, top half (DECDHL)		
ESC # 4	DEC double-height line, bottom half (DECDHL)		
ESC # 5	DEC single-width line (DECSWL)		
ESC # 6	DEC double-width line (DECDWL)		
ESC # 8	DEC Screen Alignment Test (DECALN)		
ESC % @	Select default character set, ISO 8859-1 (ISO 2022)		
ESC % G	Select UTF-8 character set (ISO 2022)		
ESC (C	Designate G0 Character Set (ISO 2022)		
ESC C	Designate G1 Character Set (ISO 2022)		
ESC * C	Designate G2 Character Set (ISO 2022)		
[ESC] + C	Designate G3 Character Set (ISO 2022)		
	Final character C for designating character sets (0) , A and B apply to VT100 and		
	up, the remainder to VT220 and up):		
	$C = \boxed{0} \rightarrow \text{DEC Special Character and Line Drawing Set}$		
	$C = \boxed{A} \rightarrow \text{United Kingdom (UK)}$		
	$C = \boxed{B} \rightarrow \text{United States (USASCII)}$		
	$C = \boxed{4} \rightarrow \text{Dutch}$		
	$C = \boxed{C}$ or $\boxed{5} \rightarrow \text{Finnish}$		
	$C = \boxed{\mathbb{R}} \rightarrow \text{French}$		
	$C = \boxed{\mathbb{Q}} \rightarrow \text{French Canadian}$		
	$C = \boxed{K} \rightarrow German$		
	$C = \boxed{Y} \rightarrow \text{Italian}$		
	$C = \boxed{\text{E}}$ or $\boxed{6} \rightarrow \text{Norwegian/Danish}$		
	$C = \boxed{Z} \rightarrow \text{Spanish}$		
	$C = \boxed{\mathbf{H}}$ or $\boxed{7} \rightarrow \mathbf{Swedish}$		
	$C = \boxed{} \rightarrow Swiss$		
ESC 7	Save Cursor (DECSC)		
ESC 8	Restore Cursor (DECRC)		
ESC =	Application Keypad (DECPAM)		
ESC >	Normal Keypad (DECPNM)		
ESC F	Cursor to lower left corner of screen (if enabled by the hpLowerleftBugCompat		
	resource).		

Full Reset (RIS)

ESC C

ESC 1 Memory Lock (per HP terminals). Locks memory above the cursor. ESC m Memory Unlock (per HP terminals) ESC n Invoke the G2 Character Set as GL (LS2). ESC O Invoke the G3 Character Set as GL (LS3). Invoke the G3 Character Set as GR (LS3R). ESC ESC } Invoke the G2 Character Set as GR (LS2R). ESC Invoke the G1 Character Set as GR (LS1R). **Application Program-Control functions** APC P_t ST xterm implements no APC functions; P_t is ignored. P_t need not be printable characters. **Device-Control functions** $DCS P_s$; $P_s \mid P_t \mid ST$ User-Defined Keys (DECUDK). The first parameter: $P_s = \boxed{0} \rightarrow \text{Clear all UDK definitions before starting (default)}$ $P_{\rm s} = \boxed{1} \rightarrow \text{Erase Below (default)}$ The second parameter: $P_{\rm c} = \boxed{0} \rightarrow \text{Lock the keys (default)}$ $P_s = \boxed{1} \rightarrow \text{Do not lock}.$ The third parameter is a ';'-separated list of strings denoting the key-code separated by a '/' from the hex-encoded key value. The key codes correspond to the DEC function-key codes (e.g., F6=17). DCS \$ q P_t ST Request Status String (DECRQSS). The string following the "q" is one of the following: \rightarrow DECSCA " p \rightarrow DECSCL r \rightarrow DECSTBM

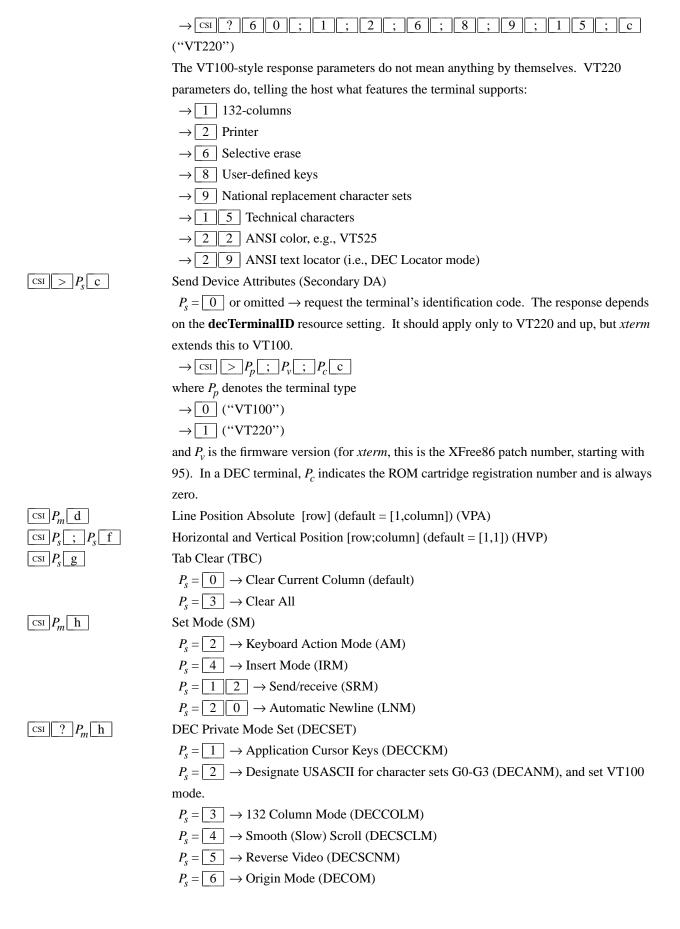

Request Termcap/Terminfo String (xterm, experimental). The string following the "q" is a list of names encoded in hexadecimal (2 digits per character) separated by ; which correspond to termcap or terminfo key names.

xterm responds with \overline{pcs} 1 + \overline{r} P_t \overline{sr} for valid requests, adding to P_t an $\overline{=}$, and the value of the corresponding string that xterm would send, or \overline{pcs} 0 + \overline{r} P_t \overline{sr} for invalid requests. The strings are encoded in hexadecimal (2 digits per character).

Functions using [CSI], ordered by the final character(s)

 $|DCS| + |q| P_t |ST|$

CSI P_b ; P_b ; P_b ; P_b ; P_b ; P_b			
	Reverse Attributes in Rectangular Area (DECRARA).		
	P_{l} ; P_{l} ; P_{r} denotes the rectangle.		
	P_s denotes the attributes to reverse. 1, 4, 5, 7		
csi u	Save cursor (ANSLSYS)		
$\begin{array}{c c} \text{CSI} & P_{p} ; P_{b} ; P_{p} \end{array}$			
	Copy Rectangular Area (DECCRA)		
	P_{l} ; P_{l} ; P_{b} ; P_{r} denotes the rectangle.		
	P_p denotes the source page.		
	P_l ; P_l denotes the target location.		
	P_p denotes the target page.		

CSI P_t ; P_l ; P_b ; P_b	r
	Enable Filter Rectangle (DECEFR)
	Parameters are [top;left;bottom;right].
	Defines the coordinates of a filter rectangle and activates it. Anytime the locator is
	detected outside of the filter rectangle, an outside rectangle event is generated and the rec-
	tangle is disabled. Filter rectangles are always treated as "one-shot" events. Any parame-
	ters that are omitted default to the current locator position. If all parameters are omitted,
	any locator motion will be reported. DECELR always cancels any prevous rectangle def-
	inition.
$CSI P_S X$	Request Terminal Parameters (DECREQTPARM)
	if P_s is a "0" (default) or "1", and xterm is emulating VT100, the control sequence elicits
	a response of the same form whose parameters describe the terminal:
	$P_s \rightarrow$ the given P_s incremented by 2.
	$1 \rightarrow \text{no parity}$
	$1 \rightarrow eight bits$
	$\boxed{1}$ $\boxed{2}$ $\boxed{8}$ \rightarrow transmit 38.4k baud
	$\boxed{1}$ $\boxed{2}$ $\boxed{8}$ \rightarrow receive 38.4k baud
	$1 \rightarrow \text{clock multiplier}$
	$\boxed{0} \rightarrow \text{STP flags}$
$CSI P_S X$	Select Attribute Change Extent (DECSACE).
	$P_s = \boxed{0} \rightarrow \text{from start to end position, wrapped}$
	$P_{s} = \boxed{1} \rightarrow \text{from start to end position, wrapped}$
	$P_s = \boxed{2} \rightarrow \text{rectangle (exact)}.$
$ \begin{array}{ c c c c c c c c c c c c c c c c c c c$	$; P_r$ x
	Fill Rectangular Area (DECFRA).
	P_c is the character to use.
	P_{b} ; P_{b} ; P_{r} denotes the rectangle.
$CSI P_S$; P_u , Z	Enable Locator Reporting (DECELR)
	Valid values for the first parameter:
	$P_s = \boxed{0} \rightarrow \text{Locator disabled (default)}$
	$P_s = \boxed{1} \rightarrow \text{Locator enabled}$
	$P_s = \boxed{2} \rightarrow \text{Locator enabled for one report, then disabled}$
	The second parameter specifies the coordinate unit for locator reports.
	Valid values for the second parameter:
	$P_u = \boxed{0}$ or omitted \rightarrow default to character cells
	$P_u = \boxed{1} \rightarrow \text{device physical pixels}$
	$P_u = \boxed{2} \rightarrow \text{character cells}$
CSI P_l ; P_l ; P_b ; P_r	\$ z
	Erase Rectangular Area (DECERA).
	P_{l} ; P_{b} ; P_{r} denotes the rectangle.

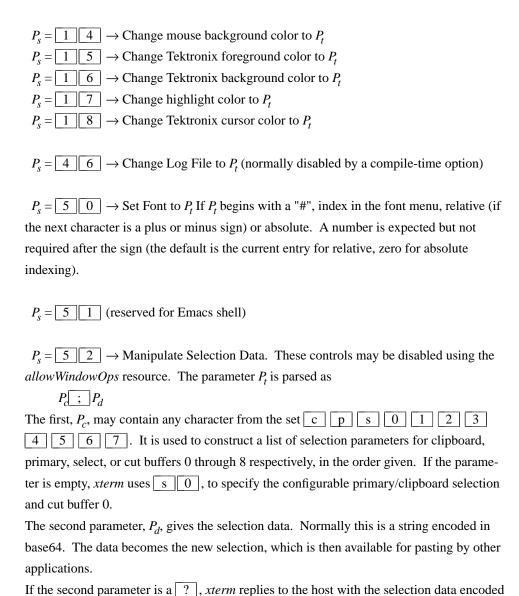

CSI P_m , {	Select Locator Events (DECSLE)
	Valid values for the first (and any additional parameters) are:
	$P_s = \boxed{0}$ \rightarrow only respond to explicit host requests (DECRQLP)
	(default) also cancels any filter rectangle
	$P_s = \boxed{1}$ \rightarrow report button down transitions
	$P_s = \boxed{2} \rightarrow \text{do not report button down transitions}$
	$P_s = \boxed{3} \rightarrow \text{report button up transitions}$
	$P_s = \boxed{4} \rightarrow \text{do not report button up transitions}$
$CSIP_{l}$; P_{l} ; P_{b} ; P_{r}	\$ [{
	Selective Erase Rectangular Area (DECSERA).
	P_{l} ; P_{l} ; P_{r} denotes the rectangle.
$CSI P_S$	Request Locator Position (DECRQLP)
	Valid values for the parameter are:
	$P_s = \boxed{0}$, 1 or omitted \rightarrow transmit a single DECLRP locator report
	If Locator Reporting has been enabled by a DECELR, xterm will respond with a
	DECLRP Locator Report. This report is also generated on button up and down events if
	they have been enabled with a DECSLE, or when the locator is detected outside of a filter
	rectangle, if filter rectangles have been enabled with a DECEFR.
	$\rightarrow \boxed{\text{CSI}} P_e \boxed{;} P_b \boxed{;} P_r \boxed{;} P_c \boxed{;} P_p \boxed{\&} \boxed{\text{w}}$
	Parameters are [event;button;row;column;page].
	Valid values for the event:
	$P_e = \boxed{0} \rightarrow \text{locator unavailable} - \text{no other parameters sent}$
	$P_e = \boxed{1}$ \rightarrow request - xterm received a DECRQLP
	$P_e = \boxed{2} \rightarrow \text{left button down}$
	$P_e = \boxed{3} \rightarrow \text{left button up}$
	$P_e = \boxed{4} \rightarrow \text{middle button down}$
	$P_e = \boxed{5} \rightarrow \text{middle button up}$
	$P_e = \boxed{6} \rightarrow \text{right button down}$
	$P_e = \boxed{7} \rightarrow \text{right button up}$
	$P_e = \boxed{8} \rightarrow \text{M4 button down}$
	$P_e = \boxed{9} \rightarrow \text{M4 button up}$
	$P_e = \boxed{1} \boxed{0} \rightarrow \text{locator outside filter rectangle}$
	"button" parameter is a bitmask indicating which buttons are pressed:
	$P_b = \boxed{0} \rightarrow \text{no buttons down}$
	$P_b \& \boxed{1} \rightarrow \text{right button down}$
	$P_b \& \boxed{2} \rightarrow \text{middle button down}$

 P_b & $\boxed{4}$ \rightarrow left button down P_b & $\boxed{8}$ \rightarrow M4 button down

"row" and "column" parameters are the coordinates of the locator position in the xterm window, encoded as ASCII decimal.

The "page" parameter is not used by xterm, and will be omitted.

Operating System C	ontrols
$ \begin{array}{c c} \hline \text{OSC} P_{s} ; P_{t} \text{ST} \end{array} $	onti dis
$\begin{array}{c c} \hline \text{OSC} P_s & ; P_t \\ \hline \end{array}$	Set Text Parameters. For colors and font, if P_t is a "?", the control sequence elicits a response which consists of the control sequence which would set the corresponding
	value. The <i>dtterm</i> control sequences allow you to determine the icon name and window
	title.
	$P_s = \boxed{0} \rightarrow \text{Change Icon Name and Window Title to } P_t$
	$P_s = \boxed{1}$ \rightarrow Change Icon Name to P_t
	$P_s = \boxed{2}$ \rightarrow Change Window Title to P_t
	$P_s = \boxed{3}$ \rightarrow Set X property on top-level window. P_t should be in the form "prop=value",
	or just " $prop$ " to delete the property
	$P_s = \boxed{4}$; c ; $spec \rightarrow$ Change Color Number c to the color specified by $spec$, i.e., a
	name or RGB specification as per <i>XParseColor</i> . Any number of <i>c name</i> pairs may be
	given. The color numbers correspond to the ANSI colors 0-7, their bright versions 8-15,
	and if supported, the remainder of the 88-color or 256-color table.
	If a "?" is given rather than a name or RGB specification, xterm replies with a control
	sequence of the same form which can be used to set the corresponding color. Because
	more than one pair of color number and specification can be given in one control
	sequence, xterm can make more than one reply.
	The 8 colors which may be set using 1 0 through 1 7 are denoted <i>dynamic colors</i> , since the corresponding control sequences were the first means for setting xterm 's
	colors dynamically, i.e., after it was started. They are not the same as the ANSI colors.
	One or more parameters is expected for P_t . Each successive parameter changes the next
	color in the list. The value of P_s tells the starting point in the list. The colors are specified
	by name or RGB specification as per <i>XParseColor</i> .
	If a "?" is given rather than a name or RGB specification, xterm replies with a control
	sequence of the same form which can be used to set the corresponding dynamic color.
	Because more than one pair of color number and specification can be given in one control
	sequence, xterm can make more than one reply.
	$P_s = \boxed{1} \boxed{0} \rightarrow \text{Change VT100 text foreground color to } P_t$
	$P_s = \boxed{1}$ $\boxed{1}$ \rightarrow Change VT100 text background color to P_t
	$P_s = \boxed{1}$ $\boxed{2}$ \rightarrow Change text cursor color to P_t
	$P_s = \boxed{1} \boxed{3} \rightarrow \text{Change mouse foreground color to } P_t$

 P_t ST N_t N_t N

using the same protocol.

PC-Style Function Keys

If *xterm* does minimal translation of the function keys, it usually does this with a PC-style keyboard, so PC-style function keys result. Sun keyboards are similar to PC keyboards. Both have cursor and scrolling operations printed on the keypad, which duplicate the smaller cursor and scrolling keypads.

X does not predefine NumLock (used for VT220 keyboards) or Alt (used as an extension for the Sun/PC keyboards) as modifiers. These keys are recognized as modifiers when enabled by the **numLock** resource, or by the DECSET $1 \ 0 \ 3 \ 5$ control sequence.

The cursor keys transmit the following escape sequences depending on the mode specified via the **DECCKM** escape sequence.

Key	Normal	Application	
Cursor Up	CSI A	SS3 A	
Cursor Down	csi B	SS3 B	
Cursor Right	csi C	ss3 C	
Cursor Left	CSI D	SS3 D	

The home- and end-keys (unlike PageUp and other keys also on the 6-key editing keypad) are considered "cursor keys" by *xterm*. Their mode is also controlled by the **DECCKM** escape sequence:

Key	Normal	nal Application	
Home	CSI H	SS3 H	
End	csi F	SS3 F	

The application keypad transmits the following escape sequences depending on the mode specified via the **DECPNM** and **DECPAM** escape sequences. Use the NumLock key to override the application mode.

Not all keys are present on the Sun/PC keypad (e.g., PF1, Tab), but are supported by the program.

Key	Numeric	Application	Terminfo	Termcap
Space	SP	SS3 SP	-	-
Tab	TAB	SS3 I	-	-
Enter	CR	SS3 M	kent	@8
PF1	SS3 P	SS3 P	kf1	k1
PF2	SS3 Q	SS3 Q	kf2	k2
PF3	ss3 R	SS3 R	kf3	k3
PF4	SS3 S	SS3 S	kf4	k4
* (multiply)	*	ss3 j	-	-
+ (add)	+	ss3 k	-	-
, (comma)	,	SS3 1	-	-
- (minus)	-	ss3 m	-	-
. (Delete)		csi 3 ~	-	-
/ (divide)	/	SS3 O	-	-
0 (Insert)	0	CSI 2 ~	-	-
1 (End)	1	ss3 F	kc1	K4
2 (DownArrow)	2	csi B	-	-
3 (PageDown)	3	csi 6 ~	kc3	K5
4 (LeftArrow)	4	csi D	-	-
5 (Begin)	5	csi E	kb2	K2
6 (RightArrow)	6	csi C	-	-
7 (Home)	7	SS3 H	ka1	K 1
8 (UpArrow)	8	CSI A	-	-
9 (PageUp)	9	CSI 5 ~	ka3	K3
= (equal)	=	SS3 X	-	-

They also provide 12 function keys, as well as a few other special-purpose keys.

Key	Esca	ape S	Sequ	ence
F1	SS3	P		
F2	SS3	Q		
F3	SS3	R		
F4	SS3	S		
F5	CSI	1	5	~
F6	CSI	1	7	~
F7	CSI	1	8	~
F8	CSI	1	9	~
F9	CSI	2	0	~

F10	CSI	2	1	~
F11	CSI	2	3	~
F12	CSI	2	4	~

Older versions of *xterm* implement different escape sequences for F1 through F4. These can be activated by setting the **oldXtermFKeys** resource. However, since they do not correspond to any hardware terminal, they have been deprecated. (The DEC VT220 reserves F1 through F5 for local functions such as **Setup**).

Key	Escape Sequence				3
F1	CSI	1	1	~	-
F2	CSI	1	2	~	
F3	CSI	1	3	~	
F4	CSI	1	4	~	

In normal mode, i.e., a Sun/PC keyboard when the **sunKeyboard** resource is false, *xterm* recognizes function key modifiers which are parameters appended before the final character of the control sequence.

Code	Modifiers
2	Shift
3	Alt
4	Shift + Alt
5	Control
6	Shift + Control
7	Alt + Control
8	Shift + Alt + Control

For example, shift-F5 would be sent as CSI 1 5; 2 ~

If the alwaysUseMods resource is set, the Meta modifier also is recognized, making parameters 9 through 16.

VT220-Style Function Keys

However, *xterm* is most useful as a DEC VT102 or VT220 emulator. Set the **sunKeyboard** resource to true to force a Sun/PC keyboard to act like a VT220 keyboard.

The VT102/VT220 application keypad transmits unique escape sequences in application mode, which are distinct from the cursor and scrolling keypad:

Key	Numeric	Application
Space	SP	SS3 SP
Tab	TAB	ss3 I
Enter	CR	ss3 M
PF1	SS3 P	ss3 P
PF2	SS3 Q	SS3 Q
PF3	ss3 R	ss3 R
PF4	SS3 S	ss3 S
* (multiply)	*	ss3 j
+ (add)	<u> </u>	SS3 k
, (comma)	,	ss3 1
- (minus)	[-]	ss3 m
. (period)		ss3 n
/ (divide)	7	SS3 O
0	0	ss3 p
1	1	ss3 q
2	2	ss3 r
3	3	SS3 S

4	4	SS3	t	
5	5	SS3	u	
6	6	SS3	\mathbf{v}	
7	7	SS3	\mathbf{w}	
8	8	SS3	X	
9	9	SS3	\mathbf{y}	
= (equal)		SS3	X	

The VT220 provides a 6-key editing keypad, which is analogous to that on the PC keyboard. It is not affected by **DECCKM** or **DECPNM/DECPAM**:

Key	N	orn	ıal	Ap	plica	tion
Insert	CSI	2	~	CSI	2	~
Delete	CSI	3	~	CSI	3	~
Home	CSI	1	~	CSI	[1]	~
End	CSI	4	~	CSI	4	~
PageUp	CSI	5	~	CSI	5	~
PageDown	CSI	6	~	CSI	6	~

The VT220 provides 8 additional function keys. With a Sun/PC keyboard, access these keys by Control/F1 for F13, etc.

Key	Esca	ipe S	Sequ	ence
F13	CSI	2	5	~
F14	CSI	2	6	~
F15	CSI	2	8	~
F16	CSI	2	9	~
F17	CSI	3	1	~
F18	CSI	3	2	~
F19	CSI	3	3	~
F20	CSI	3	4	~

VT52-Style Function Keys

A VT52 does not have function keys, but it does have a numeric keypad and cursor keys. They differ from the other emulations by the prefix. Also, the cursor keys do not change:

Key	Normal/Application		
Cursor Up	ESC A		
Cursor Down	ESC B		
Cursor Right	ESC C		
Cursor Left	ESC D		

The keypad is similar:

Key	Numeric	Application
Space	SP	ESC ? SP
Tab	TAB	ESC ? I
Enter	CR	ESC ? M
PF1	ESC P	ESC P
PF2	ESC Q	ESC Q
PF3	ESC R	ESC R
PF4	ESC S	ESC S
* (multiply)	*	ESC ? j
+ (add)	+	ESC ? k

, (comma)	,	ESC ?	l
- (minus)		ESC ?	m
. (period)		ESC ?	n
/ (divide)	/	ESC ?	0
0	0	ESC ?	р
1	1	ESC ?	q
2	2	ESC ?	r
3	3	ESC ?	S
4	4	ESC ?	t
5	5	ESC ?	u
6	6	ESC ?	v
7	7	ESC ?	w
8	8	ESC ?	X
9	9	ESC ?	y
= (equal)	=	ESC ?	X

Sun-Style Function Keys

The *xterm* program provides support for Sun keyboards more directly, by a menu toggle that causes it to send Sunstyle function key codes rather than VT220. Note, however, that the *sun* and *VT100* emulations are not really compatible. For example, their wrap-margin behavior differs.

Only function keys are altered; keypad and cursor keys are the same. The emulation responds identically. See the xterm-sun terminfo entry for details.

HP-Style Function Keys

Similarly, *xterm* can be compiled to support HP keyboards. See the xterm-hp terminfo entry for details.

The Alternate Screen Buffer

Xterm maintains two screen buffers. The normal screen buffer allows you to scroll back to view saved lines of output up to the maximum set by the **saveLines** resource. The alternate screen buffer is exactly as large as the display, contains no additional saved lines. When the alternate screen buffer is active, you cannot scroll back to view saved lines. **Xterm** provides control sequences and menu entries for switching between the two.

Most full-screen applications use terminfo or termcap to obtain strings used to start/stop full-screen mode, i.e., smcup and rmcup for terminfo, or the corresponding ti and te for termcap. The **titeInhibit** resource removes the ti and te strings from the TERMCAP string which is set in the environment for some platforms. That is not done when **xterm** is built with terminfo libraries because terminfo does not provide the whole text of the termcap data in one piece. It would not work for terminfo anyway, since terminfo data is not passed in environment variables; setting an environment variable in this manner would have no effect on the application's ability to switch between normal and alternate screen buffers. Instead, the newer private mode controls (such as $1 \ 0 \ 4 \ 9$) for switching between normal and alternate screen buffers simply disable the switching. They add other features such as clearing the display for the same reason: to make the details of switching independent of the application that requests the switch.

Bracketed Paste Mode

When bracketed paste mode is set, pasted text is bracketed with control sequences so that the program can differentiate pasted text from typed-in text. When bracketed paste mode is set, the program will receive: ESC [200° , followed by the pasted text, followed by ESC [201° .

Mouse Tracking

The VT widget can be set to send the mouse position and other information on button presses. These modes are typically used by editors and other full-screen applications that want to make use of the mouse.

There are six mutually exclusive modes. One is DEC Locator mode, enabled by the DECELR $\begin{bmatrix} CSI \end{bmatrix} P_S \begin{bmatrix} \vdots \\ Z \end{bmatrix}$

control sequence, and is not described here (control sequences are summarized above). The remaining five modes are each enabled (or disabled) by a different parameter in DECSET $\[\] P_m \[\] h \]$ or DECRST $\[\] P_m \[\] 1$ control sequence.

Manifest constants for the parameter values are defined in **xcharmouse.h** as follows:

#define SET_X10_MOUSE 9
#define SET_VT200_MOUSE 1000
#define SET_VT200_HIGHLIGHT_MOUSE 1001
#define SET_BTN_EVENT_MOUSE 1002
#define SET_ANY_EVENT_MOUSE 1003

The motion reporting modes are strictly *xterm* extensions, and are not part of any standard, though they are analogous to the DEC VT200 DECELR locator reports.

Parameters (such as pointer position and button number) for all mouse tracking escape sequences generated by *xterm* encode numeric parameters in a single character as *value*+32. For example, ! specifies the value 1. The upper left character position on the terminal is denoted as 1,1.

X10 compatibility mode sends an escape sequence only on button press, encoding the location and the mouse button pressed. It is enabled by specifying parameter 9 to DECSET. On button press, *xterm* sends $\boxed{\text{CSI}}$ $\boxed{\text{M}}$ $C_bC_xC_y$ (6 characters). C_b is button–1. C_x and C_y are the x and y coordinates of the mouse when the button was pressed.

Normal tracking mode sends an escape sequence on both button press and release. Modifier key (shift, ctrl, meta) information is also sent. It is enabled by specifying parameter 1000 to DECSET. On button press or release, *xterm* sends $\boxed{\text{CsI}} \boxed{\text{M}} G_b C_x C_y$. The low two bits of G_b encode button information: 0=MB1 pressed, 1=MB2 pressed, 2=MB3 pressed, 3=release. The next three bits encode the modifiers which were down when the button was pressed and are added together: 4=Shift, 8=Meta, 16=Control. Note however that the shift and control bits are normally unavailable because *xterm* uses the control modifier with mouse for popup menus, and the shift modifier is used in the default translations for button events. The *Meta* modifier recognized by *xterm* is the *mod1* mask, and is not necessarily the "Meta" key (see *xmodmap*). G_x and G_y are the x and y coordinates of the mouse event, encoded as in X10 mode.

Wheel mice may return buttons 4 and 5. Those buttons are represented by the same event codes as buttons 1 and 2 respectively, except that 64 is added to the event code. Release events for the wheel buttons are not reported.

Button-event tracking is essentially the same as normal tracking, but xterm also reports button-motion events. Motion events are reported only if the mouse pointer has moved to a different character cell. It is enabled by specifying parameter 1002 to DECSET. On button press or release, xterm sends the same codes used by normal tracking mode. On button-motion events, xterm adds 32 to the event code (the third character, C_b). The other bits of the event code specify button and modifier keys as in normal mode. For example, motion into cell x, y with button 1 down is

reported as $\[\]$ $\[\]$

Any-event mode is the same as button-event mode, except that all motion events are reported, even if no mouse button is down. It is enabled by specifying 1003 to DECSET.

Tektronix 4014 Mode

Most of these sequences are standard Tektronix 4014 control sequences. Graph mode supports the 12-bit addressing of the Tektronix 4014. The major features missing are the write-through and defocused modes. This document does not describe the commands used in the various Tektronix plotting modes but does describe the commands to switch modes.

BEL	Bell (Ctrl-G)
BS	Backspace (Ctrl-H)
TAB	Horizontal Tab (Ctrl-I)
LF	Line Feed or New Line (Ctrl-J)
VT	Cursor up (Ctrl-K)
FF	Form Feed or New Page (Ctrl-L)
CR	Carriage Return (Ctrl-M)
ESC ETX	Switch to VT100 Mode (ESC Ctrl-C)
ESC ENQ	Return Terminal Status (ESC Ctrl-E)
ESC FF	PAGE (Clear Screen) (ESC Ctrl-L)
ESC SO	Begin 4015 APL mode (ignored by xterm) (ESC Ctrl-N)
ESC SI	End 4015 APL mode (ignored by xterm) (ESC Ctrl-O)
ESC ETB	COPY (Save Tektronix Codes to file COPYyyyy-mm-dd.hh:mm:ss) (ESC Ctrl-W)
ESC CAN	Bypass Condition (ESC Ctrl-X)
ESC SUB	GIN mode (ESC Ctrl-Z)
ESC FS	Special Point Plot Mode (ESC Ctrl-\)
ESC 8	Select Large Character Set
ESC 9	Select #2 Character Set
ESC :	Select #3 Character Set
ESC ;	Select Small Character Set
OSC $P_{\scriptscriptstyle S}$; $P_{\scriptscriptstyle t}$ BEL	Set Text Parameters of VT window
	$P_s = \boxed{0}$ \rightarrow Change Icon Name and Window Title to P_t
	$P_s = \boxed{1}$ \rightarrow Change Icon Name to P_t
	$P_s = \boxed{2} \rightarrow \text{Change Window Title to } P_t$
	$P_s = \boxed{4} \boxed{6} \rightarrow \text{Change Log File to } P_t \text{ (normally disabled by a compile-time option)}$
ESC	Normal Z Axis and Normal (solid) Vectors
ESC a	Normal Z Axis and Dotted Line Vectors
ESC b	Normal Z Axis and Dot-Dashed Vectors
ESC C	Normal Z Axis and Short-Dashed Vectors
ESC d	Normal Z Axis and Long-Dashed Vectors
ESC h	Defocused Z Axis and Normal (solid) Vectors

ESC i	Defocused Z Axis and Dotted Line Vectors
ESC j	Defocused Z Axis and Dot-Dashed Vectors
ESC k	Defocused Z Axis and Short-Dashed Vectors
ESC 1	Defocused Z Axis and Long-Dashed Vectors
ESC p	Write-Thru Mode and Normal (solid) Vectors
ESC q	Write-Thru Mode and Dotted Line Vectors
ESC r	Write-Thru Mode and Dot-Dashed Vectors
ESC S	Write-Thru Mode and Short-Dashed Vectors
ESC t	Write-Thru Mode and Long-Dashed Vectors
FS	Point Plot Mode (Ctrl-\)
GS	Graph Mode (Ctrl-])
RS	Incremental Plot Mode (Ctrl-^)
US	Alpha Mode (Ctrl)

VT52 Mode

Parameters for cursor movement are at the end of the $\boxed{\text{ESC}} \boxed{Y}$ escape sequence. Each ordinate is encoded in a single character as value+32. For example, $\boxed{!}$ is 1. The screen coordinate system is 0-based.

ESC A	Cursor up.
ESC B	Cursor down.
ESC C	Cursor right.
ESC D	Cursor left.
ESC F	Enter graphics mode.
ESC G	Exit graphics mode.
ESC H	Move the cursor to the home position.
ESC I	Reverse line feed.
ESC J	Erase from the cursor to the end of the screen.
ESC K	Erase from the cursor to the end of the line.
ESC $Y P_S P_S$	Move the cursor to given row and column.
ESC Z	Identify
	\rightarrow ESC / Z ("I am a VT52.")
ESC =	Enter alternate keypad mode.
ESC >	Exit alternate keypad mode.
ESC <	Exit VT52 mode (Enter VT100 mode).
